

# TPI PURPLE FERTILIZER

Contains Auxinns, Gibberellins and Cytokinins

## TPI GROWTH ORGANIC Liquid Organic Fertilizer

Liquid organic fertilizer produced from digestion process of natural organic substances such as plants, leaves and food-remains using advance production technology, giving rise to brownish black liquid product. TPI GROWTH ORGANIC liquid organic fertilizer consists of substances that are essential for plant growth, such as primary plant nutrients nitrogen, phosphorus and potassium; secondary plant nutrients that includes calcium, magnesium and sulfur; supplementary minerals such as iron, manganese, copper, boron, molybdenum, zinc, and chloride together with humic substances and plant hormones.

Provides accelerated growth to plants when TPI GROWTH ORGANIC liquid organic fertilizer is absorbed through leaves.

Contains nutrients and substances that are essential for plants, namely:

- ▶ Amino acids and various organic substances that promotes plant growth through cell division.
- ▶ Plant hormones, such as Auxins, Gibberellins and Cytokinins that stimulates plant growth.
- ▶ TPI GROWTH ORGANIC Liquid Organic Fertilizer has been certified under the standard of both the Department of Agriculture and the Land Development Department, therefore, the product is safe to users as well as being environmentally friendly.

*Suitable for any type of plants such as rice, sugar canes, corns, tapioca trees, rubber trees, palm trees, flower and fruits etc.*
